### **DETAILED ACTION**

Claims 1-17 have been cancelled. Claims 18-23 have been newly added.

#### ***Oath/Declaration***

This application presents a claim for subject matter not originally claimed or embraced in the statement of the invention. Note that the originally filed claims and abstract are directed to ubiquitin fusion proteins. A supplemental oath or declaration is required under 37 CFR 1.67. The new oath or declaration must properly identify the application of which it is to form a part, preferably by application number and filing date in the body of the oath or declaration. See MPEP §§ 602.01 and 602.02.

#### ***Specification***

Applicant is reminded of the proper content of an abstract of the disclosure.

A patent abstract is a concise statement of the technical disclosure of the patent and should include that which is new in the art to which the invention pertains.

Note that the present abstract is directed to ubiquitin fusion proteins that are not being claimed.

#### ***Priority***

This application is claiming the benefit of a prior filed nonprovisional application under 35 U.S.C. 120, 121, or 365(c). Copendency between the current application and the prior application is required.

The continuing information has been amended to indicate that 07/169,833 is a continuation in part of 06/717,209. However, these applications are not co-pending. Applicant 06/717,209 was abandoned 27 July 1987 and application 07/169,833 was not filed until 17 March 1988.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 18-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-11 of U.S. Patent No. 4,751,180. Although the conflicting claims are not identical, they are not patentably distinct from each other because they are directed to overlapping methods of producing SOD fusion proteins in a heterologous host cell, particularly prokaryotes. The claims of U.S. Patent No. 4,751, 180 fairly encompass production in the prokaryote *B. subtilis* as it is disclosed as a particularly preferred host at column 2, lines 17-23, and at least claim 10 is directed to general prokaryotic hosts.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1631

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 18-20 and 22 are rejected under 35 U.S.C. 102(b) as being anticipated by Steimer et al. (*Journal of Virology*, April 1986).

Applicant is being given priority benefit to application 07/169,833, filed until 17 March 1988, as set forth above.

Steimer et al. discloses recombinant production in *E. coli* of a human superoxide dismutase/human p31 fusion protein. See abstract.

Claims 18-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Hallewall et al. (U.S. Patent No. 5,252,476).

Hallewall et al. discloses production of human superoxide dismutase fused to additional amino acids (for example a secretory signal sequence and/or acetylation signal) in a variety of host cells including yeast, *E. coli* and *B. subtilis*. See abstract; claims; columns 2-3; column 6, line 51, through column 7, line 2.
